Export Control Notice (ITAR / EAR)

This software is published as publicly available open-source software. The complete source code has been released to the public without restriction via a publicly accessible repository (GitHub). As such, it constitutes information in the “public domain” as defined in the International Traffic in Arms

Regulations (ITAR), 22 CFR §120.34, and “published” technology/software as described in the Export Administration Regulations (EAR), 15 CFR §§734.3(b)(3) and 734.7, and is therefore not subject to the ITAR and not subject to the EAR.

PALMETTO implements standard, openly published digital signal processing techniques (frequency-shift keying modulation and demodulation, convolutional forward error correction, block interleaving, and soft-decision Viterbi decoding) intended for use in the Amateur Radio Service. It contains no cryptographic functionality for the purpose of concealing the content of communications.

Notwithstanding the above, users are solely responsible for compliance with all applicable export control laws and regulations of the United States and of their local jurisdiction, including any restrictions on the use, re-export, or transfer of this software or derivative works to embargoed destinations, denied parties, or prohibited end uses.

Amateur Radio Use

Transmission of signals generated by this software requires an appropriate amateur radio license and must comply with the regulations of the licensing authority in the operator's jurisdiction (in the United States, FCC Part 97). The author assumes no responsibility for unlicensed or non-compliant operation.
